

A revolution in lumbar support

When it comes to vehicle seats, we know one size doesn't fit all. But Morfit does.

- provides pain relief, support and comfort
- highly customisable – tailor Morfit to anyone's needs
- super easy to use – with automatic, single-button press to program
- versatile – transform any seat into one that supports optimal posture and reduces pressure points
- slim enough to fit the small of your back
- strong enough to hold its shape
- light enough to take anywhere
- cost effective.

Posture correction

Medically designed

Fully adjustable

Also available

Morfit Original self-adjusting manual lumbar support

Featuring the same Interlock™ foam core as its electric counterpart; Morfit Original has a simple manual pump requiring two-handed operation, it is battery-free and suitable for all environments, even outdoors as it can withstand moisture. While setup requires a little more learning, its adaptability ensures personalised support wherever needed.

Supporting allied health professionals and end-users

As an Australasian company providing lumbar supports for drivers in pain, we cater to a diverse clientele of drivers, including everyday commuters, truck drivers, and professionals behind the wheel, as well as individuals with disabilities or those managing disabling conditions like arthritis. When allied health professionals prescribe a Morfit or refer an individual to us, we want to ensure comprehensive support.

Our commitment extends beyond sales; we prioritise pain reduction and improved quality of life. We offer assistance not only to end-users but also to allied health professionals, providing guidance on device usage, car seat setup, and ergonomic support. Consider us your trusted partner in enhancing driving comfort.

Feel free to reach out to us for assistance – we're always here to help.

An ergonomic fit at the push of a button

Guaranteed back pain relief

Morfit is an innovative lumbar support that gives immediate relief from low back pain and also works as a long-term preventative measure against future back pain. Human backs are made for standing; spines when standing can hold a neutral curve for hours. Morfit replicates this posture while driving and offers guaranteed back pain relief.

Morfit is ideal for anyone who has pain or stiffness from sitting in a vehicle or back pain, buttock and thigh pain, or pain following back surgery.

Highly customisable

Morfit uses Interlock Foam™ in its fluid state, to move and mould into the space between the driver's back and their seat. Once shaped, a vacuum interlocks the foam particles giving a precise, custom fit and firm support that holds good posture to make any vehicle seat as supportive and comfortable as an ergonomic office chair. Once Morfit is set it remembers your shape until you choose to reset it.

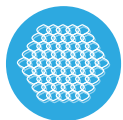

Morfit is totally adjustable, fitting people of any shape and size, whatever their personal comfort preferences or driving positions might be.

Clinically proven

Morfit has been proven in both trials and real-world testing, where it is shown to relieve back pain in 90% of users while driving.

Use in any vehicle

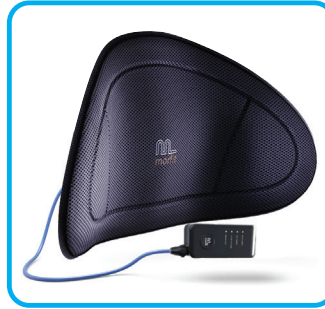

3D mesh breathable cover

Vacuum set

An ergonomic fit, every time, for everyone

We all know that 'the fit' is ultimately important.

Morfit enables drivers to continue to drive the car they love, but to do it in comfort. Reducing their fatigue and distraction and improving their concentration. Morfit will help anyone with a back injury, sciatica, pain caused by disc lesions and spinal arthritis. It will help

physically disabled people get 'locked' into their seats, improving their torso stability and evenly distributing the contact pressure, for both vehicle seats and wheelchairs.

Set in 40 seconds

A single button press is all it takes. So easy to use.

Morfit Electric actually pushes the user into an upright sitting position in its moulding phase, it then wraps around the user, before holding them with this customised shape when it 'sets' firm. No other device whether built into a vehicle seat nor after market can do this.

Speed the road to independence and mobility

Morfit is a valuable addition to the independence toolkit, helping people on their journey to autonomy and self-sufficiency.

Whether someone is on a 'Return to Work' program, has arthritis, or are disabled and travel, Morfit is a cost-effective way to helping anyone driving a vehicle on their road to recovery, with measurable and meaningful outcomes.

Portable and very versatile

Simple to install.

From car, to wheelchair, to helicopter, and even on an airplane, Morfit sits snug against the seat, is easily transferable and portable. With straps to hold it in place and a durable, breathable and washable cover, Morfit Electric is built tough to withstand long-term use.

How Morfit® works

- 1 Morfit starts soft and malleable.
- 2 The driver leans back against Morfit to create an exact imprint of their spinal shape.
- 3 Morfit's interlock foam is set firm and strong, using a vacuum.
- 4 Easy to use – simply press a button.
- 5 Reset as often as you like.
